Power Packs, Pump Skids,  
Portable Test Carts and Test Benches

## Liquid Pumps

### AIR DRIVEN FROM 60 PSI TO 101,000 PSI

Maximator high efficiency pumps are ideal for a broad variety of oil, water, and chemical applications. They feature a large air piston joined to a smaller diameter plunger. The pressure ratio is the ratio of these two areas and is the method of determining maximum output pressure. Higher pressures are obtained by using higher pressure ratios. Maximator model numbers reflect the pump's nominal pressure ratios, while the technical data indicates exact ratios.

Maximator air driven pumps cycle automatically. The pump stops automatically when the output pressure forces and the air drive forces are equal. The pump restarts with a slight drop in the outlet pressure or an increase in the air drive pressure.

### FEATURES

- **Easy to install and operate**
- **Pressure maintained without energy consumption**
- **A safe option for hazardous areas...no electrical power required**
- **Pilot air control for remote operation standard on many models**
- **External spool valve for quick maintenance on most models**
- **Dry Air Spool valve option available for severe service application**
- **Chemical service pumps are standard with separation fitting**
- **Optional seal materials, port connections, double acting, multiple air heads, single stroke, adjustable stroke, special pumps, just ask!**

### HOW TO SELECT A MAXIMATOR PUMP

1. Consider the type of fluid to be pumped and compatible materials.
2. Know the available minimum plant air pressure
3. Determine the required outlet pressure.
4. Determine the required flow rate.
5. Feel free to consult your distributor or MAXPRO for application assistance.

Flow rates for each pump, at various air drive pressures and outlet pressures, are provided in the catalog. These pumps run very rapidly at no load and slow down as pressure increases. The pump will eventually come to a stop at the "stall" pressure, which is the air drive pressure times the pressure ratio of the pump. At this "stall" point there is no flow and no air consumption. The pump will hold the outlet pressure indefinitely and will only stroke if the outlet pressure drops or the air drive pressure is increased.

### INSTALLATION AND MAINTENANCE

- Maximator pumps can be installed in any position, but vertical is best for longest seal life.
  - All connections to the pump, both liquid (inlet and outlet) and air drive lines, must be run with equal or greater size than the connections to the pump.
  - The maximum recommended height of a pump suction above the fluid level is 10 ft. for L pumps, 7 ft. for S pumps, and 3 ft. for PPO and PP pumps. Operate pump slowly during initial prime.
  - Drive air should be filtered between 5μ and 40μ and have a maximum dewpoint of 50°F. Very wet air will wash out lubricant and cause exhaust icing. Very dry air (dew point below 0°F) will dry out lubricant and cause premature failure of spool O-rings and requires the use of the Dry Air Spool option.
  - Pumped liquids should be filtered at 100μ or better, viscosity between 1-100 cst.
  - Pump performance is affected by many operating conditions. Extreme temperatures, pressures, and high duty cycles will increase maintenance frequency.
  - All units are lubricated at the factory with silicone free semi-synthetic grease. After 2-3 months of normal (50% duty) operation, the standard spool seals should be inspected for wear and re-lubricated. Based on this inspection, future maintenance intervals can be planned and further disassembly and lubrication of other moving seals may be necessary. Optional Dry Air Spool seals require less maintenance.
  - MAXPRO offers complete technical and service support for all Maximator pumps
- Customer service is our priority!

PPO pumps are lightweight and rugged making them ideal for portable power packs and are available in eight pressure ratios as listed below. PPO pumps are single acting, single air drive head.

- Anodized aluminum pump heads on the PPO4-PPO12, cast iron pump heads on the PPO22-PPO189. Tool steel plungers and polyurethane seals on all.
- All PPO series pumps are standard with bottom inlet. For a side inlet, add -S to the catalog number. (PPO22 and above only.)
- Maximum air drive pressure is 145 psi. PPO pumps require less drive pressure because the pump is driven in both directions with no spring under the piston.
- This design reduces noise and provides less chance of cavitation.
- Minimum air drive pressure 15 psi.
- For air control option, add -ACM to the catalog number.
- Double acting are available as a special order.

# S

## SERIES

PRESSURES FROM  
105 TO 14,500 PSI

S pumps are compact and lightweight and are designed for simple installation in both static and portable applications. Available in six pressure ratios, S pumps are ideal for applications demanding fast response times.

- S pumps are single acting, single air drive head types.
- Cast iron pump heads, carbon steel plungers and polyurethane seals.
- All S pumps are standard with side inlet only.
- Maximum air drive pressure is 145 psi.
- Minimum air drive pressure 15 psi.
- For air control option, add -AC to the catalog number.
- No pilot port. Internally piloted.

### TECHNICAL DATA S PUMPS

CATALOG NUMBER	PRESSURE RATIO	MAXIMUM OUTLET PRESSURE (PSI)	DISPL. PER CY-CLE (IN. <sup>3</sup> )	CONNECTIONS (FNPT - IN.)		WEIGHT (LBS.)
				INLET	OUTLET	
S15	1:17	2,465	1.73	3/4	1/2	20
S25	1:25	3,625	1.20	1/2	1/2

S150	1:156	14,500	0.19	1/2	1/2	

S-D pumps are compact and lightweight and are designed for simple installation in both static and portable applications. Available in six pressure ratios, S-D pumps are ideal for high flow applications. The S-D pumps are the double acting version of the S pumps.

- S-D pumps are double acting, single air drive head types.
- Cast iron pump heads, carbon steel plungers and polyurethane seals.
- All S-D pumps are standard with side inlets only.
- There are two inlets (same side) and two outlets (same side).
- Maximum air drive pressure is 145 psi.
- Minimum air drive pressure 15 psi.
- For air control option, add -ACP to the catalog number.
- All S-D pumps come with an unregulated pilot port, 1/8" FNPT, in the top cap. This feature provides more accurate pressure control and is an ideal location for control instrumentation.

# WATER or OIL SERVICE

# PP

## SERIES

PRESSURES FROM  
60 TO 60,000 PSI

PP pumps are compact and lightweight and feature rugged construction. They are available as single acting with either single, double, or triple air drive heads and double acting with single air drive head.

- PP4 through PP12 pumps have anodized aluminum pump heads and stainless steel plungers. PP22 through PP189 have stainless steel pump heads and plungers. All PP pumps have polyurethane seals with Buna-N O-rings standard.
- All PP series pumps are standard with a bottom inlet. For a side inlet, add -S to the catalog number. For a hand lever, add -HL (PP22 and above only.).
- Air drive pressure range is 15 - 145 psi.
- For air control option, add -ACM to the catalog number.
- With the hand lever option, the pump can operate with air or hand lever.
- Multiple air heads increase the effective pressure ratio of the pump. This provides higher pressure capabilities using less air pressure to achieve a given outlet pressure.

# WATER OR OIL SERVICE

## L SERIES

PRESSURES FROM  
165 to 101,000 PSI

**NOTE:** L500 pumps have polyurethane seals and Buna-N O-rings and are available side inlet only.  
 \*These pumps have UHMWPE seals and Buna-N O-rings.  
 Maximum allowable oil/water temperature is 140°F.  
 Air section temperature rating: 0°F to 140°F.  
 Viton is a registered trademark of E.I. DuPont de Nemours & Co., Inc.

L pumps are available as single acting pumps with either a single or double air drive head and double acting with single air drive head (See L-D).

- L pumps have stainless steel pump heads and 17-4 plungers.
- All L pumps have UHMWPE (Ultra High Molecular Weight Polyethylene) seals and Viton<sup>2</sup> O-rings (-VE), except as noted.
- L pumps come standard with bottom or side inlet. For a side inlet, add -S to the catalog number.
- Air drive pressure range is 15-145 psi unless limited by outlet pressure.
- Air drive inlet is 1/2" FNPT.
- For air control option, add -ACP to the catalog number.
- All L pumps come with an unregulated pilot port, 1/8" FNPT, in the top cap. This feature provides more accurate pressure control and is an ideal location for control instrumentation.
- All L pumps are available with a double air drive head. This doubles the pressure rating of the pump, allowing the use of a lower ratio base pump, to provide higher flow rates. It is also used to achieve a given outlet pressure with less air drive pressure.

### L500-S AND L250-2-VE THROUGH L500-2-S

**L-D** pumps are double acting versions of the workhorse L series pumps.

- L-D pumps deliver approximately 50% more flow with less pulsation.
- All are single air head style, 8 pressure ratios available.
- Stainless steel bodies and plunger with UHMWPE (Ultra High Molecular Weight Polyethylene) seals and Viton<sup>2</sup> O-rings (-VE).
- L10D-L35D pumps are standard with bottom inlet. For a side inlet, add -S.
- L60-DS - L250DS pumps are only available with side inlet.
- Operating pressure range is 15-145 psi.
- For air control option, add -ACP to the catalog number.
- All L-D pumps come with an unregulated pilot port, 1/8" FNPT. This standard feature allows easy on/off pump control with a very small valve or pilot port.

# CHEMICAL SERVICE

# PPSF

## SERIES

PRESSURES FROM  
60 TO 14,500 PSI

**PPSF** pumps are rugged and designed for chemical service applications. These pumps are available as single acting pumps with single air drive head and distance piece which provides a separation between the liquid and air drive sections.

- **PPSF pumps have stainless steel pump heads and plungers.**
- **PPSF pumps have PTFE seals with Viton<sup>2</sup> O-rings.**
- **PPSF pumps are standard with bottom inlet. For a side inlet, add -S to the catalog number.**
- **Maximum air drive pressure is 145 psi. PPSF pumps require less drive pressure because the pump is driven in both directions with no spring under the piston. This design reduces noise and provides less chance of cavitation.**
- **Minimum air drive pressure 15 psi.**
- **For air control option, add -ACM to the catalog number.**

# PORTABLE SYSTEMS

## POWER PACKS

Portable systems are ideal for generating elevated hydraulic or water pressures, using only shop air, at a variety of locations throughout a facility. They are completely portable and require only a shop air line to operate if the reservoir option is selected.

A variety of pressure ranges are available to fit your specific requirements, from low pressures of 1,000 psi to high pressures of 101,000 psi. You may choose from a number of options to complete the test system best suited for your application.

### Power Packs - OIL OR WATER

- ◆ Lightweight, portable
- ◆ Economical hydraulic power
- ◆ Totally self-contained package

#### ORDERING INFORMATION\*

	MTTP	03	-	O	-	PPO	-	1G	-	G
	Max. Req'd Pressure	Service		Pump		Reservoir		Options		
01	1,000 psi	O Oil		PPO or S Oil		N None, plate mounted		G Outlet gauge		
02	2,000 psi	W Water		PP or L Water				V Vent valve		
03	3,000 psi					1G 1 gallon S.S.		RD Relief Device		
05	5,000 psi					2G 2 gallon S.S.		Call to discuss your specific application.		
10	10,000 psi					8G 8 gallon S.S.				
60	60,000 psi					1.5G 1.5 gallon carbon steel				

#### FLOW SCHEMATIC

## TEST CARTS

### Test Carts - OIL OR WATER

- ◆ Hydrostatic testing
- ◆ Hydraulic power
- ◆ Cycle testing
- ◆ Leak testing

#### ORDERING INFORMATION\*

	MTTC	10	-	O	-	L	-	8GP	-	RD
	Max. Req'd Pressure	Service		Pump		Reservoir		Options		
01	1,000 psi	O Oil		PPO or S Oil		N None		ACC Outlet gauge		
03	3,000 psi	W Water		PP, L or Water		2G 2 gallon S.S.		DG Vent valve		
05	5,000 psi			GX		8G 8 gallon polyethylene		DV Relief Device		
10	10,000 psi									
60	60,000 psi					8GSS 8 gallon S.S.		RD		

#### FLOW SCHEMATIC

## PUMP SKIDS

### Pump Skids - OIL OR WATER

- ◆ Compact, complete packaged systems
- ◆ Standard powder coated or stainless steel frame

Pump skids are compact systems with most components mounted within the boundaries of the frame. The systems can be built for water or oil service and have a control panel to contain all gauges and valves.

A variety of pressure ranges and flows are available, for testing components, ranging from 500 psi to 60,000 psi. These systems can be supplied with a reservoir or a city water valved inlet. Reservoirs come with a fill/breather cap, liquid level sight gauge and drain connection.

#### ORDERING INFORMATION\*

MTPS	05	-	W	-	PP72	-	2G	-	RD
Max. Req'd Pressure	Service		Pump		Reservoir		Options		
01	1,000 psi	O	Oil	PPO or S	Oil	N	None, plate mounted	G	Outlet gauge
02	2,000 psi	W	Water	PP or L	Water			V	Vent valve
03	3,000 psi					1G	1 gallon S.S.	RD	Relief Device
05	5,000 psi					2G	2 gallon S.S.		Call to discuss
10	10,000 psi					8G	8 gallon S.S.		your specific application.
60	60,000 psi					1.5G	1.5 gallon carbon steel		

## POWER CUBE

## FLOW SCHEMATIC (See Test Carts)

## TEST BENCHES

### Test Benches - OIL OR WATER, AIR OR GAS

- ◆ Hydrostatic testing
- ◆ Burst testing
- ◆ Cycle/fatigue testing
- ◆ Leak testing

MAXPRO test benches are designed for durability, ease of use and accessibility. These test benches can be equipped for use with oil, water, air, gas or any combination of test medium. The same test bench could be set up for hydrostatic testing with water and/or leak testing with gas.

MAXPRO test benches can be provided with manual control or push button PLC control to handle your specific application.

Test chambers can be included and can be horizontal or vertical. When specifying a test bench that is to include a test chamber with a windowed door, please specify the required chamber size.

#### ORDERING INFORMATION\*

MTTB	10	-	W	-	G	-	M	-	L	-	N	-	DLE	-	RS	-	
Pressure			Service								Air Amplifier				Options		
05	1,000 psi		O	Oil											RI	Remote operating isolation valve	
10	2,000 psi		W	Water											RS	Remote operating pump shut-off valve	
15	3,000 psi		A	Air to 5,000 psi maximum											RV	Remote operating vent valve	
20	5,000 psi		G	Gas to 21,000 psi maximum											T	Pressure transducer specify 0-10V or 4-20 ma output	
30	10,000 psi		N	None - for second service											DP	Digital pressure indicator	
60	60,000 psi														PI	Peak pressure indicator	
Operation								Pump				Gas Boosters					
M	Manual						L Water Pumps				DLE Gas booster						
R	Push Button						N None				N None						

\* The photos and ordering information are shown to indicate capabilities and options. Each system is custom designed to meet specific operating requirements.

# ACCESSORIES

## HIGH PRESSURE RELIEF VALVES

**MT10RV** - PRESSURES FROM 1,000 TO 10,000 PSI

**MT25RV** - PRESSURES FROM 2,500 TO 25,000 PSI

**MT10RV**

**MT25RV**

Dimension	MT10RV	MT25RV
A	8.13"	9.94"
B	1.56"	2.13"
C	3.50"	1.68"
D	1.50"	2.00"
E	2.50"	5/16" Allen Wrench
F	1/4" FNPT (2)	1/4" H.P.

**DIMENSIONS (inches)**

Catalog Number	Connection Size		Orifice (in.)	Service	Pressure Rating (psi) @ R.T.		Valve Panel Hole	Body Diameter
	Inlet	Outlet			Minimum Setting	Maximum Setting		
MT10RV	1/4" FNPT	1/4 FNPT	0.070	Liquid/Gas	1,000	10,000	1.38	1.50
MT25RV	1/4" H.P.	1/4 FNPT	0.070	Liquid/Gas*	2,500	25,000	1.625	2.00

All dimensions are for reference only and are subject to change.

When selecting multiple items, the pressure rating would be that of the lowest rated components.

\* Not bubble tight on gas service.

All general terms and conditions of sale, including limitations of our liability, apply to all products and services sold.

## DRY AIR SPOOLS For severe duty service

In applications where very dry air or nitrogen is used to drive Maximator pumps or boosters, there is a spool seal option available to provide longer duty between maintenance.

This Dry Air Spool (DAS) option should be considered for extreme operating conditions involving air or gas drive mediums below 0°F. dewpoint, and similarly, very cold climate applications (-40°C.).

This design can be retrofitted to existing pumps and boosters as it only involves the spool, spool sleeve, and seals. The spool block remains the same. Be sure to use an appropriate tool to pull the spool sleeve! Minimum air drive with this option is 30 psig.

To order with a pump simply add - DAS to model number. To retrofit to an existing pump, order "Dry Air Spool" and specify the pump model and serial number.

## HIGH PRESSURE DATA LOGGER

Maxpro Technologies offers an electronic pressure logger to simplify the recording of testing data.

The unit is designed to digitally record pressure during tests, complementing Maxpro pump and booster packaged power systems as well as other types of power systems.

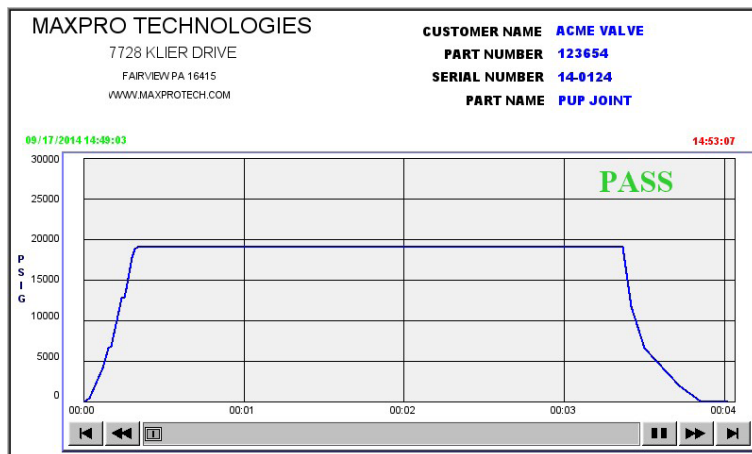

- Pressure loggers are useful in any industry that has need for an easy, accurate way to record pressure tests.
- The complete Pressure Logger comes with a pressure transducer, 2 pre-formatted jump drives and instructions, including step by step instructions on how to create customized test reports.

### Pressure Logger Features:

- 7" Color touch screen
- Instant Test Report
- USB Memory Port
- Ethernet Port
- 120 V 60 Hz or 230 V 50/60 Hz
- Digital Indication of Realtime Pressure and Peak Pressure
- Trending On screen
- Data Storage for import into Spreadsheets or Test Report
- Auto Peak Reset
- Pressure ranges available from 0-100 psi to 0-100,000 psi

Dimensions	
	Maxpro Pressure Logger:
Height	12"
Width	10"
Depth	8"
Weight	12 lb.
Transducer Cable	2 feet long

### Options Available:

- Keyboard with touchpad
- Thermocouple and RTD temperature sensors
- Multiple transducers for different pressure ranges
- Single channel logger standard, up to 10 channels optional

## AIR CONTROL PACKAGES

Consisting of a filter, regulator with gauge, shut-off valve and required fittings

- ACM....For all PPO, PP & PPSF pumps, and MPLV air amplifiers
- AC.....For all S Pumps
- ACP.....For all L & LSF pumps, DLA & GPLV air amplifiers and DLE gas boosters
- ACG....For all GX pumps

## PUMP CYCLE COUNTERS

To order: add suffix to pump P/N, eg. PPO12-CCW

- CCP....Panel mount, 0 - 999,999 max. cycles, 1" high x 2" wide hole
- CCW....Wall mount, 0 - 999,999 max cycles
- Reset button on both models
- Direct pump mounting is available

# OTHER PRODUCTS

---

## Valves, Fittings & Tubing

- Highest quality for superior product performance
- Standard material high strength stainless steel
- Pressures to 152,000 PSI

## Air Amplifiers & Systems

- Air driven to 4,350 PSI
- Deliver increased air pressure to shop floor equipment and work stations
- Require no electrical power
- Single or double acting models

## Gas Boosters & Systems

- Air driven to 36,000 PSI
- Ideal for gas salvage
- Units are contaminant free
- For use with a variety of gases
- Require no lubrication or electrical power

## Repair Service Available

- Guaranteed quality workmanship
- Cost effective quick turnaround
- Use original manufacturer parts
- Factory support
